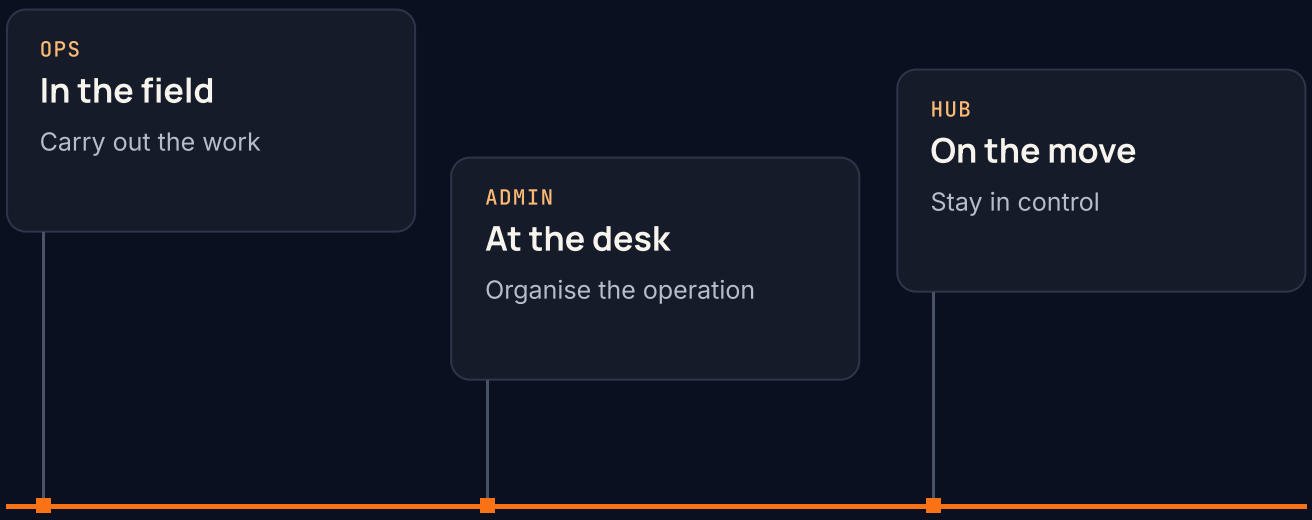
PRODUCT INFORMATION

Roveya Platform Overview

A clearer way to run field operations.

Roveya brings field work, back-office organisation and management on the move into one product ecosystem.



THREE DISTINCT PRODUCTS · ONE ECOSYSTEM

01 INTRODUCTION

Work happens across sites, teams and offices. People need to know what has been assigned, what has been done, what evidence has been recorded and what needs attention next.

Roveya brings those operational activities into one product ecosystem. It gives field workers a practical way to carry out and record work, back-office teams a place to organise the operation, and staff and managers on the move a focused view of matters requiring action.

Roveya comprises three distinct products: Roveya Admin, Roveya Ops and Roveya Hub. Each is designed for a different way of working, while contributing to a clearer operational record.

02 ECOSYSTEM

One ecosystem, three ways to work

PRODUCT	AT THE DESK **Roveya Admin**	IN THE FIELD **Roveya Ops**	ON THE MOVE **Roveya Hub**
Designed for	Back-office staff working primarily at a desk.	Field operatives and general workers.	Back-office staff and management on the go.
Purpose	Organise people, sites, projects, work, compliance and commercial processes.	Carry out assigned activity and record what happens on site.	Keep sight of priorities and take management action away from the desk.
Form	Web-based back office	Mobile field product	Mobile management product

03 PRODUCT ROLES

Roveya Admin

WEB · AT THE DESK

Organise the operation

Admin is the web-based back office. It brings operational information and management workflows into a structured environment so teams can organise work, maintain records and follow progress across clients and sites.

Its scope covers the areas needed to run field-led services, from work orders and site activity to people, compliance, projects, reporting and commercial administration. The **Roveya Admin Overview** explains its modules and workflows in greater detail.

Roveya Ops

MOBILE · IN THE FIELD

Carry out the work

Ops is the mobile field product. It supports the people attending sites and completing operational activity, giving them a place to see relevant work and capture the records produced in the field.

Those records may include attendance and timesheets, inspections, safety activity, job updates and supporting evidence, according to the workflow. The **Roveya Ops Overview** explains the field experience and the functions available to its users.

Roveya Hub

MOBILE · ON THE MOVE

Stay in control on the move

Hub is the mobile product for back-office staff and managers who need operational visibility while away from their desks. It concentrates on what needs attention: priorities, exceptions, alerts, approvals and concise views of sites and teams.

Hub has its own management role. It gives users a focused way to see context and act on it without requiring them to work through the full Admin interface on a mobile device. The **Roveya Hub Overview** covers those management workflows.

04 IN PRACTICE

From site activity to informed action

A field operation creates information throughout the day. A task is organised, a person attends a site, work progresses, evidence is recorded, and a question or exception may need a manager's decision.

Roveya's three products support different parts of that picture. Admin provides the back-office view and organisation of work. Ops supports the person doing and recording it. Hub helps staff and managers respond while on the move. The result is an operating approach centred on the people, sites and records involved in delivery.

Illustrative example: where each product's role fits

ILLUSTRATIVE

MOMENT	AT THE DESK Admin	IN THE FIELD Ops	ON THE MOVE Hub
01 A task is organised	Organisation of work		
02 A person attends a site		Attendance and timesheets	
03 Work progresses		Job updates	
04 Evidence is recorded		Inspections and evidence	
05 A decision is needed			Exceptions and approvals

Illustrative product roles only. Specific hand-offs and synchronisation are covered in the individual product overviews.

05 INDUSTRIES

Built for field-led industries

Roveya is designed for organisations working in:

01 **Construction and civil**	02 **Facilities management**
03 **Security**	04 **Cleaning and soft services**
05 **Plant and equipment**	06 **Property operations**

These sectors have different processes, but share a need to coordinate distributed teams, site activity, operational evidence and management decisions. Roveya's product structure is intended to support that common operational foundation.

06 INTEGRATIONS

Working with other systems

Roveya has an integration programme for connecting with systems used around an operation. The Integrations page shows each connection's status as available, in development or planned, so customers can see what can be used at the time they assess Roveya.

INTEGRATION STATUS LABELS

Available · In development · Planned

Integrations extend specific workflows; a provider's appearance in the directory does not itself mean that a connection is available. The relevant product and integration information explains what data moves, in which direction and under what conditions.

Roveya™

Built for the people who keep the real world moving.

07 DOCUMENTATION

This overview introduces the ecosystem. The separate Roveya Admin, Roveya Ops and Roveya Hub Overviews explain each product in depth. The Security & Trust Overview addresses verified controls, and the Implementation Overview explains how an organisation adopts Roveya. Practical guides cover field operations, compliance evidence, mobilisation, workforce readiness and applications for payment.
